

THE INFLAMMATION RESET

14-DAY CHALLENGE

A RECOV CHALLENGE

# The Inflammation *Reset*

Lose the bloat, get your energy back, and recover like you're younger — by fixing the one thing nobody told you about after 30.

YOUR COACH

**Daniel Delahunty**

POWERED BY

**RECOV**

WELCOME

# You're doing the "right" things. So why the flat days?

If you've been feeling tired all the time, running on coffee, and wondering why your energy just isn't what it used to be — you're not alone.

Once we hit our 30s, our stress hormone (cortisol) tends to stay higher for longer, our cells don't produce energy quite as efficiently, and low-level inflammation starts to build up. That combo leaves you feeling flat, foggy and frustrated — even when you're trying to do everything right.

Here's the good news: it doesn't have to stay that way. Over the next 14 days we'll focus on simple, practical ways to lower inflammation, balance your hormones and boost your energy naturally — through smart training, anti-inflammatory food, and proper recovery. This challenge is about helping your body work **with** you again, so you wake up lighter, stronger and more energised.

## Daniel Delahunty

YOUR COACH

I'm in my 50s and I live this every day. I've spent years helping people over 40 feel strong, lean and energised again — and I hate watching good people written off as "just getting older." This is the simple plan I wish everyone had.

THE CHALLENGE AT A GLANCE

Simple enough to actually finish. Strong enough to feel it.

14

DAYS

PHASES

3

DAILY FOCUSES

WHAT'S INSIDE

## Your next 14 days, mapped

Five short phases. Each one stacks on the last — nutrition, movement and mindset together, never overwhelming.

1

### Days 1–3 · Setting the foundation

Clear the inflammatory triggers and get moving gently.

2

### Days 4–6 · Superfoods + strength

Add anti-inflammatory foods and easy resistance work.

3

### Days 7–9 · Gut + heart health

Feed your gut, add active recovery, build the habit.

4

### Days 10–12 · Deepen the commitment

Hydrate, progress your training, eat with intention.

5

### Days 13–14 · Reflect + integrate

Lock in what works and set up the long game.

THE THING NOBODY MENTIONS

# What you eat vs. what you can *use*

There's a catch most people never hear: what you ingest and what your body actually utilises are two different things. You can hit your protein and your macros — but if your body is fighting low-grade inflammation, it struggles to put that fuel to work.

## WHAT YOU EAT

Heavy proteins, processed food and stress raise the inflammatory load — and your body fights the fuel instead of using it. Bloat, fatigue, slow recovery.

vs

## WHAT YOU USE

Lower the load, then feed your body fuel it can absorb fast — pre-digested, low-inflammation amino acids it can actually put to work.

**Where Recov fits:** a science-led recovery formula — all 20 amino acids, bound to serum albumin, absorbed in around 15–20 minutes, with no bloat. Built by a scientist, not a marketing team. You'll see exactly where it slots in at the end.

20

AMINO ACIDS

MIN TO ABSORB

0

BLOAT

# Days 01–03

## Setting the foundation

### NUTRITION

#### Eliminate inflammatory foods

Cut processed foods, refined sugars, trans fats and excess alcohol.  
Build meals from whole foods – vegetables, fruits, lean proteins and healthy fats.

### MOVEMENT

#### Gentle movement

No exercise right now? That's fine. Start low-impact – walking, yoga or swimming – to get the blood flowing without overloading. Aim for 30 minutes a day.

### MIND

#### Stress reduction

Take 5–10 minutes daily for deep breathing, meditation or journaling.  
Stress drives inflammation, so managing it early is key.

### DAILY CHECKLIST

- ☐ No processed food, refined sugar or excess alcohol
- ☐ 30 minutes of gentle movement
- ☐ 5–10 minutes to calm the nervous system

# Days 04–06

## Superfoods + strength work

### NUTRITION

#### Add anti-inflammatory superfoods

Work in turmeric, ginger, blueberries, cherries, leafy greens and olive oil. Pineapple, oranges and citrus, avocados and green tea too.

### MOVEMENT

#### Strength for stress management

Introduce light resistance — squats, push-ups, glute bridges and rows are perfectly fine at home. 2–3 sets every other day to lower cortisol and support metabolism.

### MIND

#### Sleep optimisation

Aim for 7–9 hours. Build a simple bedtime routine and avoid screens before bed.

### DAILY CHECKLIST

- ☐ 3+ anti-inflammatory superfoods on the plate
- ☐ 2–3 sets of resistance work (every other day)
- ☐ 7–9 hours sleep, screens off before bed

# Days 07–09

Supporting gut  
+ heart health

## NUTRITION

### Probiotics and prebiotics

Add yogurt, kefir, sauerkraut and kimchi. Include prebiotics like garlic, onions and bananas to feed the good bacteria.

## MOVEMENT

### Cardio + active recovery

20–30 minutes of moderate cardio — brisk walking, cycling or swimming — on the days you don't lift, or daily if you can.

## MIND

### Gratitude practice

Write three things you're grateful for each day to promote positivity and reduce stress.

## DAILY CHECKLIST

- ☐ Fermented foods + a prebiotic source
- ☐ 20–30 minutes of cardio or active recovery
- ☐ Three things you're grateful for, written down

# Days 10–12

## Deepening the commitment

### NUTRITION

#### Hydration & herbal support

Drink around 8 glasses of water daily and add herbal teas – green or ginger. Lemon-ginger is a personal favourite of mine.

### MOVEMENT

#### Progressive strength training

Add light weights or resistance bands – deadlifts, lunges, presses, rows and planks. If you can get into a gym, even better.

### MIND

#### Mindful eating

Eat slowly, enjoy your meals, and pay attention to how food makes you feel.

### DAILY CHECKLIST

- ☐ ~8 glasses of water + a herbal tea
- ☐ Progressive strength session with added load
- ☐ One fully mindful, unhurried meal

#### NUTRITION

##### **Maintain a balanced anti-inflammatory diet**

Stick with colourful produce, lean protein and healthy fats. Choose foods that energise you, not ones that leave you tired or bloated — and support fast recovery where it counts.

#### MOVEMENT

##### **Mix it up**

Keep workouts exciting with activities you enjoy — hiking, dancing or team sports — to stay motivated.

#### MIND

##### **Reflect & reset goals**

Reflect on your progress and set new goals for continued growth.

#### DAILY CHECKLIST

- ☐ Balanced, energising plate — note what works for you
- ☐ One workout you genuinely enjoy
- ☐ Reflect on wins + set the next goal

AFTER 14 DAYS

# What to expect

By the end of the challenge, most people notice real shifts in body and mind — feeling lighter, less bloated, with reduced joint stiffness.

Energy levels become steadier through the day, sleep often improves, and that lingering "brain fog" starts to lift. Most importantly, you'll understand how your food choices affect your mood, energy and overall wellbeing — and that's what keeps these habits going long after day 14.

— *Daniel Delahunty*

1

**Plan ahead.** Prep your meals and your workouts so the right choice is the easy one.

2

**Listen to your body.** Adjust based on how you feel, not a rulebook.

3

**Stay consistent.** Small, daily steps beat perfect ones. Progress, not perfection.

## REAL RESETS

# People who got their body back

Everyday people over 40 who lowered the load, trained smart, and recovered properly — coached by Daniel.

**Matt**

Leaner and stronger — a real coaching transformation.

**Tasha**

Down a size and full of energy — the inflammation reset stuck.

Individual results vary. Real client transformations.

## RECOVER FASTER

# Give your body fuel it can actually use

You've spent 14 days lowering the inflammatory load. The other half of the equation is feeding your body recovery fuel it can absorb — without the bloat.

## Recov

The science-led recovery formula

- All 20 amino acids — the full set your body needs
- Pre-digested & absorbed in ~15-20 minutes
- No bloat, no whey, no hype-stack
- Built by a scientist — formulation first

## Ready to recover like you're younger?

Run the reset, then keep the momentum. Start your first bottle of Recov and feel the difference fast absorption makes.
