

MEAL PREP MADE SIMPLE

NUTRITION SYSTEM

A RECOV PLAYBOOK

Meal Prep *Made Simple*

Your path to fitness success — plan once,
eat well all week, and take the guesswork
out of food.

YOUR COACH

Daniel Delahunty

POWERED BY

RECOV

WELCOME

Take control of your week, one prep at a time.

Whether you're a busy professional, a student, a parent, or just someone who wants mealtimes to be simpler — this guide hands you the insights, tips and systems to master meal prep efficiently.

In a fast-paced world, finding time to eat well is hard. But with the right knowledge and a little planning, you can take control of your diet, save serious time, and enjoy delicious, healthy meals all week. We'll walk every step — planning, shopping, cooking and storing. Let's prep efficiently together.

Be healthy — your body will thank you.

Daniel Delahunty

CERTIFIED PT & NUTRITION COACH

Meal prep is the single habit that's kept my clients consistent for years. Get this system down and eating well stops being a daily decision — it just happens.

CHAPTER 01

What a Healthy Diet Is

A healthy diet is the cornerstone of overall wellbeing. It's less about rules and more about a few solid principles you apply consistently.

BALANCE & MODERATION

A wide variety of foods from every group, mindful of portions, so you get a diverse range of nutrients without overdoing any one thing.

WHOLE FOODS

The foundation — fresh fruit, veg, whole grains, lean proteins and minimally processed foods. They promote better health and lower chronic-disease risk.

NUTRIENT DENSITY

Foods that pack lots of vitamins and minerals per calorie — fruit, veg, lean protein, whole grains, nuts and seeds.

ADEQUATE HYDRATION

Water supports digestion, nutrient absorption and temperature control. Aim around 8 cups (2L) a day — more with heat or activity.

MINDFUL EATING

- Pay attention to hunger and fullness cues.
- Eat slowly and savour each bite.
- Build a healthier relationship with food and prevent overeating.

The food groups to build from

GRAINS

Essential carbs, fibre and minerals.

Favour whole grains — wholemeal bread, oats, quinoa, brown rice — for slower digestion and steady blood sugar.

FRUIT

Nature's sweet treat — vitamins, antioxidants and fibre. Eat a range of colours for a diverse nutrient profile.

BEANS & LEGUMES

Plant-based powerhouses — fibre,

protein, complex carbs and minerals.

Ideal for vegetarians and adding texture.

VEGETABLES

Vitamins, minerals and antioxidants, low in calories. A colourful array improves digestion and overall health.

MEAT, SEAFOOD & POULTRY

High-quality protein plus iron, zinc and B12. Oily fish (salmon, trout, tuna) adds heart-healthy omega-3s.

NUTS, SEEDS, OILS & FATS

Healthy fats for hormones, brain and vitamin absorption. Choose unsaturated — olive, avocado, nut oils — and enjoy nuts in moderation.

CHAPTER 02

Build the Perfect Plate

No scales needed. Use your hand to build a balanced plate every single time.

Protein

1–2 palms

Builds and repairs tissue, supports immunity.

Carbs

1–2 cupped hands

Whole grains & starchy veg for sustained energy.

Vegetables

1–2 fists

Fibre, vitamins, minerals and antioxidants.

Fats

1–2 thumbs

Hormones, brain function and vitamin absorption.

Macro Cheat Sheets

Exactly what's protein, carb, fat and veg — with the numbers. Everything per 100g. Keep these handy while you plan.

Protein foods

FOOD	CAL	PROTEIN	CARB	FAT	FIBRE
Chicken Breast	165	31g	0g	3.6g	0g
Beef Rump Steak	250	26g	0g	17g	0g

Pecans	691	9.2g	13.9g	71g	9.6g
Sunflower Seeds	584	20.8g	20g	51g	8.6g
Brazil Nuts	656	14.3g	11.7g	66g	7.5g
Ghee	900	0g	0g	100g	0g
Avocado Oil	884	0g	0g	100g	0g

Vegetables

FOOD	CAL	PROTEIN	CARB	FAT	FIBRE
Broccoli	34	2.8g	6.6g	0.4g	2.6g
Carrots	41	0.9g	9.6g	0.2g	2.8g
Spinach	23	2.9g	3.6g	0.4g	2.2g
Bell Peppers	31	1g	6g	0.3g	2.1g
Tomatoes	18	0.9g	3.9g	0.2g	1.2g
Cabbage	25	1.3g	5.8g	0.1g	2.5g
Cauliflower	25	1.9g	5g	0.3g	2g
Green Beans	31	1.8g	7.1g	0.2g	3.4g
Kale	49	4.3g	8.8g	0.9g	3.6g
Zucchini	17	1.2g	3.1g	0.3g	1g
Eggplant	25	1g	5.9g	0.2g	3g
Sweet Potatoes	86	1.6g	20.1g	0.1g	3g
Brussels Sprouts	43	3.4g	8.3g	0.3g	3.8g
Asparagus	20	2.2g	3.7g	0.2g	2g
Celery	16	0.7g	3g	0.2g	1.6g
Cucumbers	15	0.6g	3.6g	0.1g	0.5g
Mushrooms	22	3.1g	3.3g	0.3g	1g
Onions	40	1.1g	9.3g	0.1g	1.7g
Peas	81	5.4g	14.5g	0.4g	5.1g
Corn	96	3.4g	21g	1.5g	2.4g

All amounts per 100g. Values are approximate and vary by brand and cooking method.

Portion Sizing by Activity

Your hands are the only measuring tool you need — and how much you stack on the plate scales with how active you are.

Protein

1 palm

Vegetables

1 fist

Carbs

1 cupped hand

Fats

1 thumb

For most people, 1–2 portions from each group per meal covers maintenance and general health. Scale it to your output:

Minimal activity

No exercise, under 6,000 steps/day

1×

Moderate activity

3–4 workouts/wk, 6–10k steps/day

2× P/V/C/F

High activity

6–7 workouts/wk, 10–15k steps/day

2× P/V • 4× C • 3× F

NEED MORE ON YOUR PLATE?

If you're not satisfied at meals, eating fewer meals, or not gaining muscle — add **1 cupped hand of carbs and/or 1 thumb of fat** to 2–3 meals a day.

NEED LESS ON YOUR PLATE?

If you're too full, eating more meals, or not losing weight — remove **1 cupped hand of carbs and/or 1 thumb of fat** from 2–3 meals a day.

A rough guide only — everyone's energy needs differ.

Calculate Calories & Macros

No complicated maths. Find one number — how much energy your body burns in a day — then split it across your three macros.

Calculate Your Calories

We all need different amounts of food to lose fat, build muscle or maintain weight. Here's a simple way to find your starting point.

1 Find your TDEE

Your Total Daily Energy Expenditure. Use a free calculator like **tdeecalculator.net**. Enter your gender, age, weight, height and activity level to get your daily maintenance calories.

2 Set your goal

Subtract 300–500 calories from your TDEE for fat loss. This creates a weekly deficit of 2,100–3,500 calories — roughly 0.3–0.5 kg of fat per week.

EXAMPLE

- A female with a TDEE of 2,132 calories wanting to lose ~500g/week would set her starting calories at **1,632 calories**.
- Monitor your weight weekly and adjust as needed — this is an estimate, not an exact science.

Master Your Macros

Macronutrients — protein, carbohydrates and fats — are the three essential nutrients that provide energy.

- **Protein (4 cal/g):** Essential for building and repairing tissue. Aim for 1.5–2g per kilogram of body weight. A 60 kg woman training consistently should target around 120g daily (480 calories).
- **Fat (9 cal/g):** Important for hormones, organ insulation and nutrient absorption. Aim for 20–35% of daily calories. On a 1,632 cal diet, that's roughly 54g fat (490 calories).
- **Carbohydrates (4 cal/g):** Your body's primary energy source. Fill in the remaining calories after protein and fat. On a 1,632 cal diet: $1,632 - 480 - 490 = 662$ calories → **165g carbs.**

Daily targets · 1,632 kcal fat-loss plan

Protein 30% · 480 kcal	120g
Carbs 40% · 662 kcal	165g
Fats 30% · 490 kcal	54g

CHAPTER 06

Your Meal-Prep System

Pull it together into a repeatable weekly routine. Work through these once and prep becomes second nature.

1 Set your goals

Save time? Eat healthier? Hit specific macros? Write them down — if you calculated your numbers, include them here.

2 Determine your meals

Decide how many meals to prep — breakfasts, lunches, dinners, snacks. Start small and build up.

3 Get your containers

Microwave-safe, leak-proof, stackable, in a few sizes so you can portion properly.

4 Sort your supplies & space

A dedicated prep area, a stocked pantry, and your tools — scales, boards, knives — within easy reach.

5 Create a schedule

Pick a set day/time for shopping, cooking and assembling, planned around your week.

6**Batch cook**

Choose dishes that scale — casseroles, soups, stews, roasted veg — and portion them out for the week.

7**Focus on versatility**

Cook ingredients that flex across meals — roast chicken into salads, wraps or stir-fries; grains paired with anything.

Meal prep is personal — it takes a little trial and error. Stay organised, stay flexible, and you'll get faster and more confident every week.

RECOVER FASTER

Prep the food. Nail the recovery.

You've got the meals handled. Recov covers the bit that's hardest to prep — fast, complete amino acids around training, absorbed in minutes, so the food you've prepped actually gets put to work.

Recov

The science-led recovery formula

- All 20 amino acids — a complete profile
- Pre-digested & absorbed in ~15–20 minutes
- An easy way to hit protein around training
- No bloat — built by a scientist, formulation first

Eat well all week. Recover faster.

Your prep is sorted — give your recovery the same edge.

Start your first bottle of Recov.
